Subject: Loop over columns for calculations Posted by amorrison on Fri, 04 Dec 2020 13:41:38 GMT View Forum Message <> Reply to Message

Hi,

Is it possible to loop over a set of columns and carry out an operation without having to do each column individually. I have two use cases;

Case 1 - After a core based SAR analysis find all structure columns and create the corresponding smiles code.

Case 2 - Find all numerical columns and do a round function.

Many thanks in advance,

Angus
