I cannot check on Monterey, but on older MacOS version could do one of these:

- Open Finder.
- Locate the app you're trying to open.
- Option+Click the app.
- Select Open.
- Click Open.
- The app should be saved as an exception in your security settings, allowing you to open it in the future.

Bypass the block in your Security & Privacy settings. If the previous method didn't work, you can go into your Security & Privacy settings and do it manually.

Or / And:

- Open the Apple menu, and click System Preferences.
- Click Security & Privacy.
- Click the General tab.
- Click the lock in the lower right corner of the window.
- Enter your username and password when prompted, and click Unlock.
- Click the App Store and Identified Developers radial button.
- Look for "DataWarrior was blocked from opening because it is not from an identified developer" and click Open Anyway. (In older versions of macOS, you could click Anywhere and then click Allow From Anywhere.)
- Try rerunning the app.

There are also report that you should use Safari to download an app, because other browsers may cause a problem. I don't know, whether that can be an issue for the DataWarrior.dmg file.
