In 4.2.2 macros were a rather new technology and supported only a part of DataWarrior's functionality.

Till 4.4.1 some macro concepts were changed and macro support significantly extended.

Nevertheless,

the intention was to keep old macros functional.

If some of your macros, which don't work anymore, are not confidential, then I suggest that you send them to me

to check what can be done to solve the issue and especially to recognize and remove potential bugs.

From the programming point of view macros are complex to implement and there are lots of things that can go wrong.

And since most people don't use macros frequently, it takes long to discover bugs. Therefore, I am grateful for

everybody helping to get this powerful technology to a reliable robust technology.

Thanks in advance,

Thomas
