## Subject: Select columns to hide/show Posted by ranger on Fri, 07 Oct 2016 15:04:42 GMT View Forum Message <> Reply to Message

Hi,

Is it possible to add a function to select multiple columns to show/hide? Currently, we can only do it one by one. Basically, to have a dialog box having two list boxes, left one has columns hide, right one has columns to show. You can add all, remove all or select multiple to add or remove.

Best,

Alan
