Subject: User detected Malware on Datawarrior.exe
Posted by mindhira on Thu, 02 Mar 2017 22:34:01 GMT

Hi,
We have a core installer that many users use to install Datawarrior on their computers. Today, we had a user inform us that a security scan detected malware on Datawarrior.exe. I have attached the picture he sent us. He believes this was from version 4.4.4. I have run a scan on our installers for version 4.4.4: 64bit and 32bit and version 4.4.03, 32bit. These came up clean for us, so I believe this is an isolated incident and his computer was infected by something else but I wanted to make you aware of it just in case.
Thank you,
Sheryl
