Hello. I'm having trouble doing a simple calculation withing DW. I want to multiply my IC50s by 1000 to convert from micro to nanomolar. When I input "NormalizedULK1IC50s\*1000" where the first part was input using the "Add Variable" button within the normal dialog box, it output the same "NaN" value for every cell, rather than the numerical value.

Perhaps my syntax was off?
