Hello, Thomas

Currently, I am having this problem too.

When I mouse over certain structures this error message pops up. If it would pop up only once, it (probably) wouldn't be a problem but it pops up every time!

Version of DataWarrior is 5.2.1, and I'm using it on Windows 10.

I have noticed and replicated this problem while mousing over (almost) any structure that contains copper in NCI-open database(You can download it from "NCI database Download Page" for witch I will post link in next post).

I would extract problematic data to make it easier for you to troubleshoot but program prevents me from saving due to this exact error.

Best regards!
