Subject: Installation on Windows 10
Posted by michaeldeligny on Wed, 31 May 2017 13:17:46 GMT

Dear all,

I'm trying to install Datawarrior on my new laptop with windows 10, but get error message such:
'could not find Java 2 Runtime Environment'
I'm working with 64 bits machine, and indeed on the well documented webpage of openmolecules
I noticed that installation on such a machine might be difficult.
I tried to install the 32 bits version but without success
I tried to install a Java update but without success.

Does someone has an idea ?
thank you very much for your help,
Michael.

Dear Michael,

this looks like the JRE is not properly installed. What do you get, if you open a terminal and type 'java -version'?
This should tell you, whether the JRE is available and whether it is 32-bit or 64-bit. (see installation issues description).
I get this:

java version "1.8.0_131"
Java(TM) SE Runtime Environment (build 1.8.0_131-b11)
Java HotSpot(TM) 64-Bit Server VM (build 25.131-b11, mixed mode)

If you don't get '64-bit' somewhere, then it is 32 bit.

Best wishes, Thomas
