Subject: Feature Request: Saving visible to SDF

Hi,
So often, I filter the data table to have the list I want and then I want to export these as an SDF for further use.
I find to do this, I need to remove all invisible rows first and then carefully select Save Special - SDF, if I accidentally click Save then I lose all those rows.
Please can an option be available to save visible to SDF.

Thanks,

Simon.

Hi Simon,

.true., the special export as .sdf file allows you to define only one column's entries to be used as compound name in the .sdf -- which actually may be a column previously hidden in the DW's array. On
the other hand, the normal deposit as .dwar file, as well as the special .txt export with DW's own structure representation, will equally contain the hidden columns which are again visible upon reading
these files.

Norwid

Hi Simon,

you could use 'New From Visible' and then 'Save as SDF' and just close the window.

Thomas
