Subject: is there a limit in rows to open from file

I have a file with 1.1M rows and the program seems to hang at 95% of Processing Records window...

Is there a built in limit in the number of rows one can load from a tabulated txt file?

Thanks

There is no built in limit, but when starting the Java virtual machine DataWarrior needs to define a maximum memory size, which for Windows 32-bits is about 1.2 GB, on Windows 64-bits is about twice as much.
If DataWarrior would define higher values, then Windows would refuse to start DataWarrior at all on
low memory machines.
For the Macintosh and Linux these values are a little higher and can also be changed easily in the start-up
script (Linux) or info.plist (Macintosh) depending on the physical memory.

Thanks for the reply!!

It just seems to be slow with 1.1M rows loaded...
