Subject: Link to oracle per row Posted by de_maas on Fri, 17 Feb 2023 16:28:49 GMT View Forum Message <> Reply to Message

Hi All,

I want to retrieve data from my oracle database using an id stored in my Datawarrior file. Is it possible to pass a identifier to the SQL somehow? I tried this but it isn't working:

SELECT AVAILABILITY FROM availability_info WHERE description=\$idnumber

I can't find the right synthax to do this. Same goes for the URL.

Thanks,

Peter

I just deployed an update that allows exactly that: Using "IN(\$IDNUMBER)" in the WHERE clause of an SQL statement does an on-the-fly replacement with all entries from the IDNUMBER columns to "IN('entry1','entry2','entry3',...)". If the idea is to merge the retrieved information with the currently open file, this still has to be done in a separate step.

Thomas

Thanks Thomas,

This already is a nice feature for me and merging works fine.

Cheers,

Peter
