Hello,
I would like to know if it is possible to calculate the number of days or weeks between two dates? If yes how? And in general what is the general format for date?
Many thanks
Zioubi

If you have a table with two date columns like the following
Date1Date2
10-Jan-202010-Jan-2021
15-Jan-202018-Jan-2021
22-Jan-202010-Feb-2020
and use "Data->Add Calculated Values..." with formula "Date2-Date1", then you get a new column as:

Date1Date2Delta
10-Jan-202010-Jan-2021366
15-Jan-202018-Jan-2021369
22-Jan-202010-Feb-202019
DataWarrior has no defined date format. It uses a plausibility check whether a column is likely to contain date values. If a column contains three values in a consistent format, and if two values are in the range 1-31, 1-12 (or English three letter month abbreviations), and the third looks like a year, then a column is interpreted as date values.
