Subject: Generate Explanation view based on the data from table Posted by helloWorld22 on Thu, 07 Dec 2023 11:35:04 GMT View Forum Message <> Reply to Message

Hi,

Is it possible to populate data in explation view(which is an HTML) from table view? In a scenario where I want to group a few columns and generate a table, with a headers from the actual table, it is not possible to do it in Form View. So, was wondering if it is possible to achieve it in explanation view.

Thanks
