Hi,

Is it possible to add a function to select multiple columns to show/hide? Currently, we can only do it one by one. Basically, to have a dialog box having two list boxes, left one has columns hide, right one has columns to show. You can add all, remove all or select multiple to add or remove.

Best,

Alan

Hi Alan,

hiding columns from a macro task is already more flexible. There, one can either list multiple columns by name or define other criteria, e.g. hide all columns with 'IC50' in the title. For direct UI intervention I agree that a better solution would be useful. I will add it to the list of things to be done.

Thank you for the input, Thomas
