Subject: Combined marker labels in 2D plots

Hi again Thomas,

The new, draggable marker labels are really good. However, if you label a point with more than one item (e.g. structure and name) you produce one line for each label. Would it be possible to produce a combined label (e.g. structure with name underneath) that only creates a single connecting line?

Cheers

David

Hi David,

this is a good idea, but requires quite some effort. I cannot promise anything, but will look into it to estimate, whether this is possible with a reasonable amount of work.

Best regards,

Thomas
