Subject: Updating Merged Columns

I've created a number of merged columns in a DataWarrior file. As an example, the merged column might have data for the same assay from two different vendors. When I add new data to the source columns, I noticed the merged columns are not updated. Is there a way to update merged columns when data is added to the source columns? I know you can re-calculate columns that are calculated values, so this would be similar for updated merged columns.

Thanks,
Ed
