Thank you for the prompt reply, nbehrnd,

I understand what you're saying, however, how would the formula change if there were values for both vendor_1 and vendor_2, and you wanted to show both values in the "merged" column. In the attached file, how could I get the vendor_1_2 column (the calculated column) to look like the merged column? Can that be done with a calculated expression?

Thanks for the help.

Ed
