Hi Thomas,
Thank you for your reply. I've attached a dummy Datawarrior file that shows the problem I see. For the columns shown, the Column header does not have the same name when dropping down the x-y menu in a 2D view. For example, "Dundee Ave IC50" shows up as "mean of Dundee Ave IC50" in the x-y drop down menu. The same is seen for the other columns. These are only a few of the examples. There are others. It might be I set up these columns differently when I first added them, or someone else set them up. I hope this shows you what I see.

Thanks for your help.
Ed Fritzen
