
Subject: Incorrect dearomatization of indazole structures

I am having issues with SD files where the structure is an indazole superstructure.
I have attached a SD-file as examples with 3 structures.

The problem is that during the dearomatization process DataWarrior incorrectly places the double bonds resulting in a formation of s stereocenter.

See attached image for visual differences.

Is there a way to have the dearomatization be done correctly with out using additional software?

P.s. I am using DataWarrior version 5.5.0

Sincerely, Andrievs
