Hi Thomas,

I have installed the newest version of DW from the download webpage (MD5 checked).

It is installed without any error. But when I double-clicked the icon, nothing happened. I tried to start it from the command, but no error message was given. I have also checked java version. Nothing seems to be wrong. I just installed this OS last week, so I don't have any other virus-defender apps except the Microsoft firewall itself. Is there any solution?
