Hi Thomas,

Thank you very much for your reply. It works fine now. It seems to be a Java common problem. I installed the 64-bit Java 8. And I have to manually add the Java \bin file path to the top of the OS environment path.

I think some OS could probably raise a warning like 'could not find java.dll', but mine didn't. So it took me some time to figure out what is the issue. But anyway, it works fine now! Thank you for this amazing software.

Anna
