Dear Thomas,

the File -> Save Special allows the export of DataWarrior's results as a tabulator separated ASCII file. For further work with these data, the additional tabulator after the last column is not needed (copy/paste into a spread sheet, AWK scripts). If available, a preference were given to a report where record lines end with the last entry, or change into the new line by a line feed.

This is observed for the table headers, as well as for the following records for DataWarrior 5.5.0, version for Linux/Mac, including the updates by \pi day, 2022-03-14.

Thank you,

Norwid
