Dear Nikita,

if you use Linux or OSX, I will send you a customized datawarrior.jar file without limitation. But don't complain, if the clustering process seems to take forever...

If your server runs Linux, you can install the datawarrior directory on the server and login from remote via 'ssh -X' and then launch datawarrior the usual way. Then you all DataWarrior windows open on the client machine while it executes on the server and uses server RAM and server cores.

Best wishes, Thomas
