Hi Thomas,

Thanks for getting back to me.

It just disappeared after being used briefly.

Based on your suggestion, I deleted my recent install, downloaded the dmg file and checked the md5-sum which is identical to the one on the website.

After reinstallation and being used for about 2 minutes, it crashed again.

The error message is "DataWarrior quit unexpectedly." After clicking "report...", I got the error message below.

I don't know if it will be useful to pinpoint the problem.

Is there a way that I can install Java environment myself? Thanks!
