Hmm, Please ignore my message above...

I just saw a thread in "if my PC do not install office, how can we install datawarrior and initiate it?" referencing the need to install 'vcruntime140.dll' Once I did that datawarrior runs fine.

Thanks for a fine program, it's a great tool! I use it predominately on Macs and Linux, but occasionally need to run it on Windows... maybe need to push the 'dll' message to the top.

regards,  
Greg
