Subject: Access Database not in DataWarrior List

Dear DataWarrior Community,
I searched the forum for information concerning accessing databases, but did not find the answer to my specific question. I was wondering if there exists a way to add a data retrieval process to DataWarrior to access information from the Open Source Malaria project. The site (best viewed with Chrome) is http://www.cheminfo.org/flavor/malaria/Display_data.html

Thank you. Any help of direction appreciated.
