Dear Thomas,

Thank you for your quick response. My original goal of plotting the frequencies of a structure in a bar graph for a large dataset, is not efficient at all. Upon searching the DataWarrior forum (which is what I should have done initially), I learned that I should first calculate the frequency with the function `frequencyInCategory("PlateID","Murcko")`, and then display the results in a scatter plot. I was able to display the frequency of interest for over 3000 Murcko structures AND still get a readable information, as in attached. Thank you to you and fellow warriors.
