At present the options for chart types that I can see are scatter, whisker, box, and pie. I have a list of molecules with their structures in one column, molecular weight in another. I would like to be able to generate a plot that is the molecular weight on the x axis, and count on the y axis, where count is the number of molecules in a specific bin (i.e. 150-160 Da).

Current options allow me to make a whisker plot, which is useful for smaller data sets, but I'd like a bit more of a summary plot for larger data sets.

As always, thanks for continuing to support/improve datawarrior.
