-open the dwar file in DataWarrior and then select 'Select Special As->SD-File...".
A problem may be that DataWarrior files are much more richer than SD-Files.
If you save a DataWarrior document as SD-File, then features not covered by the SD-format are lost, e.g. if multiple columns contain chemical structures, chemical descriptors, images, HTML details, macros, file descriptions, information about views and filters, row lists, etc...
If you export as SD version2 format, then you also loose the enhanced stereo information of your structures.
