Subject: Generate 2D atom coordinates gives overlapping atoms
Posted by mcmc on Tue, 31 Jan 2023 11:01:26 GMT

I have some bridged piperazines that get redrawn in a way that atoms are overlapping with the attached heterocycle upon generating 2D atom coords (which I do to superimpose the compounds in a set).
Hard to explain in words, but picture attached.
If these overlapping atoms could be avoided, that would be much appreciated.
