Subject: Link to oracle per row

Hi All,

I want to retrieve data from my oracle database using an id stored in my Datawarrior file. Is it possible to pass a identifier to the SQL somehow? I tried this but it isn't working:

```
SELECT    AVAILABILITY
FROM      availability_info
WHERE     description=$idnumber
```

I can't find the right synthax to do this. Same goes for the URL.

Thanks,

Peter
