Subject: New Aug 2016 version is slow

Has anyone else noticed that the new version 4.4.1 is slower than the previous one? Opening files and merging files takes longer to complete. Perhaps not an important issue, but something I noticed on my end.

As an aside, does anyone know how to use the exclude function while searching by structure? The new features box mentioned this, that you could search for an amine and exclude amides, I think was the example. (I realize for that particular example you could specify hydrogens to get the same effect--was just using the given example from the info box.)

Thanks for adding updates Thomas!
