I am running into the same issue as CEADOG. I save a .txt file and then try to open it again right away and I get a new dw window that just sits and loads verrrry slowly. This txt file has 14 rows for 6kb and opens immediately to "900 of 1325mb"
I've tried letting it go for up to 30 min but it never finishes. A couple times, after closing the window I'm left with an error dialog that says "uncaught exception:null" but that hasn't happened today.
This is happening with today's download version in both windows 11 and 10.
