Subject: SMILES Code

When I paste the SMILES codes of some structures, expecially the one with stereochemistry indication, an error message "Uncaught Exception:2" would pop out more than one hundred times. I can only press "OK" more than one hundred times to bypass this error. :? :cry:

D-Glucal is an example. I pasted the SMILES code "O[C@H]1[C@H](O)[C@@H](CO)OC=C1" into the structure drawing panel, and then the error message shown again and again.

My DataWarrior version is V05.05.00. Could you let me know how to fix this error? Do I miss any step?
