Thank you for your kind and prompt reply. The SMILES code is transformed via ChemDraw. I can also obtain the structure in DataWarrior via that SMILES code, but it seems the error message is unavoidable. I need to press "OK" to make the system accept the structure. However, there is no error message when I paste the SMILES code "C1CCCCC1C2CCCCC2", which corresponding to a structure without any stereochemistry information.

We install the DataWarrior on Win10, traditional Chinese version. Would this error caused by the conversion between double-byte and single-byte system?
