Thanks for the hints. I tried launch DataWarrior from command line as arrows labeled in attached screenshot, and click to edit with WYSIWYG, it looks like the echo from command line is blank. I wonder if there are any flag setting to turn on the logging/tracing in command line?

The screenshot displays a Windows File Explorer window for the directory `C:\Program Files\DataWarrior`. The file list includes folders like `example`, `jre`, `macro`, `plugin`, `reference`, and `tutorial`, along with files like `actelionclip.dll`, `DataWarrior.exe`, `datawarrior_all.jar`, and `msvcpl40.dll`. Below the file list, a command prompt window is open, showing the command `C:\Program Files\DataWarrior>DataWarrior.exe` being executed. The prompt `C:\Program Files\DataWarrior>` is circled in red. To the right, a chemical structure viewer is partially visible, showing a list of structures and a scatter plot.
