Thanks for the hints. I tried launch DataWarrior from command line as arrows labeled in attached screenshot, and click to edit with WYSIWYG, it looks like the echo from command line is blank. I wonder if there are any flag setting to turn on the logging/tracing in command line?

The screenshot displays a Windows File Explorer window for the 'DataWarrior' directory. The ribbon includes 'Organize', 'New', 'Open', and 'Select' tabs. A red arrow points to the 'Open' button. The file list shows folders like 'example', 'jre', 'macro', 'plugin', 'reference', and 'tutorial', and files like 'actelionclip.dll', 'DataWarrior.exe', 'datawarrior_all.jar', and 'msvcpl140.dll'. Below the file list is a command prompt window with the following text:

```
C:\Windows\System32\cmd.exe
Microsoft Windows [Version 10.0.19045.3693]
(c) Microsoft Corporation. All rights reserved.
C:\Program Files\DataWarrior>DataWarrior.exe
C:\Program Files\DataWarrior>
```

A red arrow points to the 'DataWarrior.exe' command, and another red arrow points to the prompt 'C:\Program Files\DataWarrior>'. To the right, a partial view of a chemical structure viewer is visible, showing a table of chemical structures and a scatter plot.
