I cannot reproduce the problem and the error message is seem rather strange in this context. Maybe there are some conflicts with the JRE. V6.0.0 on Windows had some issues with the JRE not finding its own dlls if earlier JREs are installed. Possibly, it is a conflict of that kind. Todays new version 6.1.0 contains a workaround for that problem. Maybe, that solves it. Otherwise, I need to be able to reproduce to find the issue. Does the error happen directly after selecting SaveSpecial-SD and before the dialog is shown? Does it happen with any structures? If it persists with v6.1.0, please let me know. I can build a debug version with more message output...
