it is difficult to reliably figure out in a cross-platform way the file path of running jar within the running byte code. Therefore, DataWarrior uses hard coded installer paths, which should not be changed, because not only the datawarrior_all.jar and its automatic updates, but also all example files, macros and plugins rely on this path.

I didn't try, but possibly a link at /opt/datawarrior that points to /data/opt/datawarrior could work?!
