Dear Thomas,

at present, the activation of macros via macro -> import macro requires their individual import on a one-by-one basis. I would like to suggest a change which eventually would allow to retrieve multiple .dwam files stored in a folder in common at once. I.e., inspired by a file manager,

- selection of multiple .dwam files displayed adjacent to each other by pressing the «shift» key, as an interval
- selection of multiple files displayed in scattered positions of the folders by pressing the «ctrl» key

Best regards,

Norwid
