I recently migrated from an older MacBook to one with an M1 chip running Sonoma. DataWarrior is installed but any attempt to open the application immediately results in "DataWarrior quit unexpectedly". I have included the first part of the error report at the bottom of this message. I have tried setting up my Mac from scratch as well as migrating from a back-up and I have the same issue both ways. DataWarrior worked fine on my old MacBook which I have effectively cloned onto this new one, albeit running the newer MacOS.

ERROR REPORT:

Translated Report (Full Report Below)

Process: DataWarrior [11697]
Path: /Applications/DataWarrior.app/Contents/MacOS/DataWarrior
Identifier: org.openmolecules.datawarrior
Version: 6.1 (6.1.0)
Code Type: X86-64 (Native)
Parent Process: launchd [1]
User ID: 501

Date/Time: 2024-07-31 09:33:30.4891 +0100
OS Version: macOS 14.0 (23A344)
Report Version: 12
Bridge OS Version: 8.0 (21P365)
Anonymous UUID: E9332AE4-8EB1-AC95-3357-88743D1673E6
