Dear mcmc,

sorry, it took me a while to understand the issue. A single semicolon was never meant to be a valid separator. DataWarrior always creates and expects '; ' (and '\n'). Nevertheless, you are right that version 5 also separated entries, when delimited with a single semicolon. This was more an error than intended.

For compatibility I will go back to the old handling in version 6.2.2 that will be out soon...

Sorry for the inconvenience,

Thomas
