dear Thomas,

I missed in the Macro Editor any reference to helpful non-coding commentaries, similar to those existing in other computational languages. Did I missed the information in some other place?
...
Just in case, I tested: //, /*..*/, # and ' (used in other programs), but none of them worked in DW macros.

In case they are not yet considered, Would it be possible to include that possibility for DW macros?
It would be a great help for long codings...

Thank you for your attention
sincerly Julio
