After trying many alternatives, the best way to include non-coded information on long DW macros may be to insert comments on "show message" tasks.
It may slow down the macro execution but have no other alternative to be somehow self-explanatory.

For example:

<task name="showMessage">
message= NOW THE VISIBLE ROWS WILL BE SAVED TO C:/....
</task>

Another example of use is included into the NTN macro for semi-automatically save all information on raw dwar and toxicity-filtered and mmff94s+ conformer sdf files for Vina, after running a DW Build Evolutionary Library

Hope it may serve to other DW macro-designers !
