Subject: R group count

Hi Thomas,
First of all let me say what a great bit of software to release for everyone to use.

My question relates to calculating the count of R-groups. I've found the frequency expression in the add calculate value drop down, but this only works by supplying an R-group to calculate for. Is it possible to calculate the frequency of all R-groups in a particular column which I can then use for filtering, e.g. remove all R-groups that only appear once.

Thanks,

Angus
