Dear all,

I'm trying to install Datawarrior on my new laptop with windows 10, but get error message such:
'could not find Java 2 Runtime Environment'

I'm working with 64 bits machine, and indeed on the well documented webpage of openmolecules I noticed that installation on such a machine might be difficult.

I tried to install the 32 bits version but without success

I tried to install a Java update but without success.

Does someone has an idea ?

thank you very much for your help,

Michael.
