Dear all,

I'm trying to install Datawarrior on my new laptop with windows 10, but get error message such:
'could not find Java 2 Runtime Environment'
I'm working with 64 bits machine, and indeed on the well documented webpage of openmolecules
I noticed that installation on such a machine might be difficult.
I tried to install the 32 bits version but without success
I tried to install a Java update but without success.

Does someone has an idea ?
thank you very much for your help,
Michael.
