I assume that some other software has installed a 32-bit Java environment and made it the preferred one.

If you type 'java -version' in a cmd window, you should see, whether you use a 32- or 64-bit version of the JRE.

If you see something like 'Java HotSpot(TM) 64-Bit Server VM', then you have a 64 bit JRE. If you don't

find '64 Bit' in the output, then you have a 32-bit Java installation.

Thomas
