
Subject: Calculations on multiple values gives one value?!

Is there a way to do calculations on multiple values in one cell and get the same amount of values in another cell.

For example:

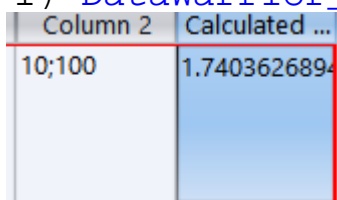

In one cell (column2) I have 10 and 100 separated by ;

If I add a calculated value (log(Column2), I get 1.74...

Instead of 1.74, can I get 1;2?
