Subject: Hiding data points and corresponding legend

Hi,

I wondered if it is currently possible, say in a scatter or box plot to also hide the legends for a group of data points when this group is hidden (i.e. deselected for visualization).

Let's say I have 10 groups of data, and I color the data points by group. I then get a legend with the colors of the 10 groups. If I now hide 5 groups using a category filter, the color legend still shows 10 groups. Is there a setting which allows synchronization between visible data points and corresponding legend?

Thanks/Evert
